THE WHITNEY MUSEUM ENDORSED A BREAKTHROUGH IN ART BUT WITH ONE CONDITION . . .

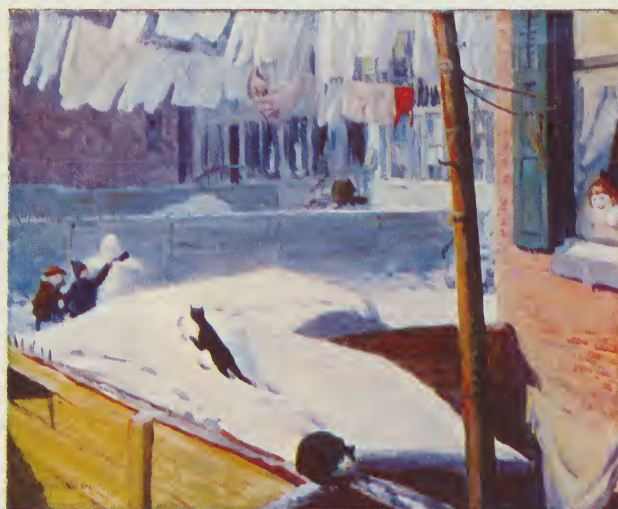

A totally new art reproduction process that duplicates the tone and texture depths of paintings has been developed . . . and immediately started great controversy in the art world. Called 'chromography' the process creates a facsimile of an original work, faithfully reproducing the master-painting. The likeness is so true that the Whitney Museum of American Art, in endorsing the reproduction of paintings from its collection, insisted that the replicas vary in size from the original to prevent confusion.

Every line and degree of shading, each brushstroke and area of surface texture, every color and hue is accurately re-created by an electronic and photographic process. The finished work is mounted, in most cases, on stretched canvas and then framed. The result is a duplicate original so exact that even art critics and dealers cannot always tell it from the masterwork.

Twenty paintings from the Museum's collection of 20th century American art are available. The selection was made by curators, critics and collectors. Many are reproduced for the first time. To further enhance the unique beauty of each work, a custom frame was created by Kulicke craftsmen to compliment the painting. Each chromograph comes complete with a designed frame, ready for hanging. An original commentary by the Museum staff giving a description of the painting, its place in American art and a biography of the artist is included plus a certificate of authorization from the Whitney.

The Whitney is unique among the world's major art museums in its exclusive concentration on American painting and sculpture. Since its founding nearly forty years ago, it has made its basic purpose not only the preservation of our visual arts but their encouragement as well.

High quality reproductions can play an important role in this program. No reproduction can have all the qualities — historic and personal as well as aesthetic — of an original work of art. Nevertheless, such recent advances in reproduction technology as chromography make it possible for the Museum more nearly to share a first-hand visual experience of its collection with individuals everywhere. In understanding the accomplishments of American painting, the experience of owning a fine reproduction can parallel that of owning a fine painting.

Twentieth-century American artists have made a substantial contribution to world culture. By deepening the public's knowledge of American art, chromographs may serve not only to create awareness of past achievements but to stimulate future achievement as well. In authorizing these chromographic reproductions of twenty paintings from its collection, the Whitney Museum is furthering its efforts on behalf of American art.
